(344) 2寸をして微分

$$\frac{\dot{g}_{1}}{g_{1}^{2}} = \frac{\beta P}{\alpha} \sin \theta \dot{\theta}$$

$$\dot{g}_{1}^{2} = \frac{\beta H}{\alpha} = P_{1} = \beta \sin \theta \Rightarrow \dot{\theta} = \frac{\alpha}{P_{1}^{2}} \Delta$$

$$-\dot{\pi}, \quad \dot{g}_{2} = \frac{\partial H}{\partial P_{2}} = \frac{P_{2}}{g_{1}^{2}} = \frac{\alpha}{g_{1}^{2}}$$

$$\dot{\sigma}_{1}^{2} = \dot{g}_{2}^{2} + \frac{\alpha}{g_{1}^{2}} = \frac{\alpha}{g_{1}^{2}} \Delta$$

$$\dot{\sigma}_{2}^{2} = \frac{\partial H}{\partial P_{2}} = \frac{\partial H}{\partial P_{2}} = \frac{\partial H}{\partial P_{2}} \Delta$$

$$\dot{\sigma}_{3}^{2} = \frac{\partial H}{\partial P_{2}} = \frac{\partial H}{\partial P_{2}} \Delta$$

$$\dot{\sigma}_{3}^{2} = \frac{\partial H}{\partial P_{2}} = \frac{\partial H}{\partial P_{2}} \Delta$$

$$\dot{\sigma}_{3}^{2} = \frac{\partial H}{\partial P_{2}} = \frac{\partial H}{\partial P_{2}} \Delta$$

$$\dot{\sigma}_{3}^{2} = \frac{\partial H}{\partial P_{2}} = \frac{\partial H}{\partial P_{2}} \Delta$$

$$\dot{\sigma}_{3}^{2} = \frac{\partial H}{\partial P_{2}} \Delta$$

座標 82, 8 について ~ (read aloud) を表すことである。

(3.44), (3.45)を見る、

(b) 準周期解

$$\Sigma(\alpha, H_0) = \{(8_1, 8_2, P_1, P_2) \in \mathbb{R}^4 \mid P_2 : \alpha, H(8_1, 8_2, P_1, P_2) = H_0\}$$
 \$1.3 n 娲合は $\alpha = A_0$ で角運動量.

$$H_0 = \frac{p_1^2}{2} + \frac{\alpha^2}{2g_1^2} - \frac{c}{g_1} - \frac{5}{g_1^2}$$

P,2 ≥ 0 だから

$$\frac{P_{i}^{2}}{2} = f(g_{i})^{def} - H_{0}g_{i}^{2} - Cg_{i} + \frac{1}{2}(d^{2}-2\delta) \leq 0 \qquad (*)$$

判別式
$$\theta = 0$$
 \Rightarrow $\theta = -\frac{C^2}{2(\alpha^2 - 2\delta)}$
このとき、 $\theta_1 = -\frac{C}{2H_0}$.

$$P_1 \equiv 0$$
 , $P_2 = \alpha$
