問化
$$f: \mathbb{R}^2 \to \mathbb{R} : (s,t) \to \hat{f}(s,t)$$

$$\Phi : \mathbb{R}^2 \to \mathbb{R}^4 : (s,t) \to \Phi(s,t) = (\alpha, \beta, \xi, \eta)$$

$$= (s, t, \frac{2f}{2s}, \frac{2f}{2t})$$

のとき

$$\Phi^*(\dot{\xi}d\alpha + \eta dy)$$

解)
$$\Phi^*(\xi dx + T dy) = \frac{\partial f}{\partial s} ds + \frac{\partial f}{\partial t} dt = df$$
.

(e) 微分形式の概念の座標不変性

$$\chi = (\chi', \dots, \chi^n) \in \mathbb{R}^n$$
 orth

$$\chi^i: \mathbb{R}^n \to \mathbb{R}^+ \times \mathbb{R}^n \longrightarrow \mathbb{R}^n$$

$$dx^{j} = \sum_{i} \frac{\partial x^{j}}{\partial x^{i}} dx^{i} \qquad (\text{plus 2.12}) \qquad (2.17)$$

$$\frac{\partial x^{j}}{\partial x^{i}} = \begin{cases} 1 & (\text{i=j}) \\ 0 & (\text{i=j}) \end{cases}$$

。実際的意味

$$R^{2} \qquad R^{2}$$

$$(x,y) \longrightarrow (u,v) = (x,x+y) \qquad \text{or}$$

$$du = dx \qquad (2.18)$$

$$-\dot{5} \quad \frac{\partial}{\partial u} = \frac{\partial}{\partial x} \quad (?) \qquad \text{15007}$$
